Book Descriptions:

We have made it easy for you to find a PDF Ebooks without any digging. And by having access to our ebooks online or by storing it on your computer, you have convenient answers with brent cxc pottery wheel manual . To get started finding brent cxc pottery wheel manual , you are right to find our website which has a comprehensive collection of manuals listed.

Our library is the biggest of these that have literally hundreds of thousands of different products represented.

Book Descriptions:

brent cxc pottery wheel manual

Glazes will be shipped at no charge to addresses within the continental U.S. If you have purchased equipment and are eligible for the FREE Glazes Rebate, have your list of glazes ready when registering your purchase online. In the event glazes are backordered beyond 30 days, we will contact the customer to either substitute glazes for immediate shipment or get customer's approval to ship a partial order at no charge. Customer will be responsible for shipping charges on any backordered items. All requests for glazes must be submitted after equipment is delivered and within 6 months of purchase date. Valid for endusers only, no distributors or dealers eligible. During that time, they have earned a reputation for dependability that is unsurpassed by other brands. Each wheel is built with materials, components and workmanship designed to take the punishment of classroom and studio use over the long haul. A wide range of quality accessories, including handextruders, bats, and bat mobile carts are also available. Sealed bearing and hub assembly for water resistance. We hope you enjoy your new purchase! If you have purchased equipment listed in the chart above and are eligible for the FREE Glazes Rebate, have your list of glazes ready when registering your purchase online. In the event glazes are backordered beyond 30 days, we will contact the customer to either substitute glazes for immediate shipment or get customer's approval to ship a partial order at no charge. Customer will be responsible for shipping charges on any backordered items. All requests for glazes must be submitted after equipment is delivered and within 6 months of purchase date. Valid for endusers only, no distributors or dealers eligible. We trust that you will be pleased with your decision and enjoy your new wheel for years to come. Please read the enclosed safe operation, maintenance, and warranty information carefully. <http://www.dostrojar.sk/UserFiles/creating-a-business-operations-manual.xml>

- **brent cxc pottery wheel manual.**

DELIVERY INSPECTION PACKAGE CONTENTS Before signing the delivery receipt, thoroughly inspect your package. If merchandise is damaged, please make notation of the damage on delivery receipt, stating that you request an inspection by a qualified damage claim inspector. Follow up with a call to the delivery carrier, making an appointment for the inspection. Do not attempt to operate the wheel if damaged. Maximum clay weight should not exceed recommended weight for your wheel. Do not plug power cord into an extension cord. Plug directly into electrical wall outlet. Foot pedal must be fully depressed backwards off before turning wheel on. Then unplug the wheel from its power source. Take care with long hair, jewelry, and loose fitting clothing. Such items may get caught in the moving wheel head causing damage or injury. Keep tools and small parts out of reach of small children. Do not leave wheel running unattended. Repairs and modifications should be made by a qualified technician only. Stop operation of the wheel if you see or smell smoke, or if you hear unusual noises. Then turn off power, unplug power cord from outlet, and call brent Repair for assistance. Do not remove the control box and panel covers when the wheel is plugged into power. Doing so makes the internal parts vulnerable to damage. Do not attempt to move or hold the wheel during operation, or while the power is on as this could cause serious injury. Place the wheel on a flat, even surface away from other objects. Equipment must be lifted by two people, never attempt to lift the wheel by yourself. Never operate the wheel with the belt guard removed. Disconnect the power supply whenever conducting repair. The socket outlet must be in the vicinity of the machine and under immediate supervision of the service personnel at all times. Do not let the wheel stand in water. Read All Instructions Plug the wheel into a grounded 3prong 110 or 230 volt AC outlet, depending on your wheel s power

configuration. http://riolisboa.com/images/ul_files/no3YGedmILgJ.xml

If you do not have grounded outlets available and have to use an adaptor, make certain that you connect the green wire from the adaptor to a suitable ground. Note It is not safe to operate electrical equipment around water if it is not grounded. SAVE THESE INSTRUCTIONS 3 4 brent ie and iex Potters Wheels Leg Installation Once youve opened the carton and carefully removed your wheel The wheel is shipped in its tabletop configuration and comes equipped with a 9foot cord for versatility. Follow the instructions below for floormodel configuration. 1. Position the wheel on its back edge with the bottom facing Exercis you. Exercise caution not to allow the wheel to tip over as it may damage the wheel head assembly. 2. Remove the end caps from the leg stubs of the wheel this allows the legs to be inserted into the leg stubs. Remove the foot pedal and the three 3 legs from the attached box. 3. Insert a leg into one of the two bottom leg cylinders of the main assembly until fully seated. Note Each leg comes with a cap plug installed in the bottom. They may loosen some during shipping. Tap them lightly with a hammer to reseal. 5. With the legs fully seated, the wheel is at the industry standard height. If you prefer, you may raise the wheel height by loosening the set screws and pulling the legs out to the desired length. The pilot light will come on indicating that the solid state circuit that controls the motor is receiving power. With the foot pedal tipped back, the wheel head should not rotate. As the foot pedal is pushed forward, the speed should increase smoothly, up to a maximum of 240 rpm. If the wheel does not turn off with the foot pedal back, or does not run fast enough, see Troubleshooting on page 7. All wheels except the ie model are reversible. This is normal and is a result of the rubber drive belt being held in the same position since manufacturing and should go away within 10 or 15 minutes of use.

5 6 CARE With proper care and maintenance, brent wheels have been known to be in service for over 30 years. To insure this kind of dependability from your brent wheel, please follow these simple care and maintenance instructions. Turn off and unplug wheel when not in use. To ensure maximum brush life, always allow the motor to come to a complete stop before changing directions of the wheel head. Clean wheel after every use by removing splash pan and emptying contents into slop bucket. Sponge down table and legs. Clean floor of any surrounding water and wet clay. Store foot pedal on wheel table when not in use. In addition, when mopping studio floors, foot pedals should be placed on the table top of the pottery wheel. Always clean wheel with a damp sponge and water, do not use solvents and do not use a hose. Do not let wheel stand in water or slop. Store in a dry space away from outdoor elements. If placing the wheel into storage, it might be beneficial to pull your motor brushes from the motor with the wheel disconnected from power, in order to avoid problems that could arise otherwise. Keep the serial number and the date of purchase in a safe place you will need this information if you ever need service or want to make modifications to the wheel.

MAINTENANCE To ensure correct belt tension and maximum belt life, all our belt drive wheels come equipped with automatic belt tensioning devices. The spring tensioner will eliminate having to tighten the belts. It s not necessary to release the spring tensioner when removing the belt, simply roll the belt off the pulley. Check belts every five years for wear as the rubber will break down faster in some climates. To replace the belt, fit it on the small pulley first and then turn it onto the larger one. Motor brushes should be replaced every 5000 hours of operation. This equates to a standard use of 4 hours per day, 5 days per week for 5 years.

<http://www.diamondsinthemaking.com/content/bosch-hbl-445-manual>

Please be sure to include the serial number of your wheel and make of motor so that the correct brushes for your wheel can be obtained. 6 7 TROUBLESHOOTING The following is a list of the most common concerns that may be experienced while using your brent potters wheel. Most of these difficulties occur as a result of normal wear and tear and can be solved with ease. Our brent wheels have up to a ten year warranty on inhouse service and parts. Check plastic arm to see if it is tight on the bolt that runs through it. Wheel head rotates too fast or too slow 1. Turn foot pedal over and

remove the bottom plastic cover from the pedal. 2. Locate the red disc, this is the HI speed adjustment. 3. Using a small standard screwdriver, rotate the red disc clockwise to increase the speed, or counterclockwise to decrease the speed. 4. Any adjustments to the red disc may result in having to make an adjustment to the blue disc. If you increase the overall speed of the wheel, you may have to turn the blue disc clockwise to make the wheel stop when the pedal is moved to the off position. If the wheel speed is decreased, you may have to turn the blue disc counterclockwise to increase the range of motion when the foot pedal is moved to the off position. HI Adjustment Red Disc LO Adjustment Blue Disc Note The discs are very sensitive and will require very little movement, 1 to 5 degrees at a time. The wheel be can on and rotating while making this adjustment to ensure that the start point is at the desired speed. The fuse will be behind the cover. Carefully remove the fuse, a tool may be needed to gently pry the fuse out of the socket. 14 15 WARRANTY INFORMATION TERMS The brent potter s wheels warranty is limited to defects in materials and workmanship during the manufacturing process for up to ten years see chart below. All warranty work must be performed by an authorized brent dealer or by the manufacturer to maintain the warranty.

<http://d-frax.com/images/95-chevy-s10-repair-manual.pdf>

Any work done by someone other than an authorized dealer or the manufacturer will void this warranty. Warranty is nontransferable. Retain original purchase receipt. You will need this along with model number and serial number to obtain warranty service. Repair or service is done by an unauthorized dealer. Shipping damage. Damage or failure due to acts of God such as, fire, flood, electrical storms, etc. Use other than for intended. Normal wear and tear on parts such as wheel heads and belts. Modifications to the unit in any manner. REPAIR INSTRUCTIONS If you have a problem with your brent wheel within the warranty period, choose one of the following options 1. Contact the dealer from which you purchased the wheel. If they are an authorized dealer that offers parts and service, they can handle the repair or replacement. The serial number, located on a sticker underneath the wheel, will help the technician know when your wheel was built to better assist you see photos below. Parts and labor will be covered for valid warranty claims. Models B, C, CXC, EX, 16 Models ie, ier, iex You may be asked to send the defective equipment or parts in for inspection. The serial number of the wheel being repaired must accompany the defective parts for the warranty to be honored. Also include a note describing the nature of the problem. This will save the technician time since many problems are intermittent and may not show up immediately. Product No E brent Workstation Attaches to rear legs of brent wheels. Holds tools and other supplies while throwing. Height adjustable. Product No N brent Leg Extensions New, improved design. I recently came close to finding a used Skutt that was only 5 years old, but the person decided to keep it rather than sell it. Nothing used seems to be available in North Eastern Ohio, or Western PA too often. I am finding mostly Brent wheels and sometimes a Clay boss. I do know that there were a number of years when the Brents had a problem with the control panel but do not remember what years it was or how to identify them. I think it has to have physical switches to turn on and buttons. One person video taped the sound of her Brent so I could hear what it sounded like and even corrected the foot pedal when she made the video because it did not stop completely when it was supposed to be stopped. I am thinking I will give up and just buy a new wheel. I've had my Brent C since 1976 and have never had a problem with it knock wood.

drvision.org/wp-content/plugins/formcraft/file-upload/server/content/files/16271521195502---br-6104kp-manual.pdf

My Brent A, which I bought in the mid 80s, needed some pedal adjustment which I was able to do with online instructions. I bought the Brent A so that I could take it to shows for demonstrations. D Perhaps you can negotiate with the seller for a lower price. Whats the price of a new one these days. I love my Brent C. D Im sure you will be happy with one. This line of wheels became unsupported when Speedball purchased CI and the seller was all too well aware of this. Plus, you get a full warranty and no more wasted time chasing elusive leads. It has taken a beating, not near yours, but over the years it has had its days. Learned to use direct drive at Penn State, and those were C back in the... mid to late 70s. Good wheels, but then I could crank them down when pushing. CXC I have never been able to crank down. Now where I teach has a cxc Brent that when donated had a flat place in the belt where it had sat unused for 5 years. It has now started grinding and running rough so it now sits waiting for someone to decide it is important enough to fix as I do not have the knowledge to fix it. I wouldn't buy a used wheel for more than half of the manufacturers list price for the same model new. It was made in the very early days made around 1971 according to Brent and was lacking the bracket to hold a splash pan on later wheels. I am completely happy with the wheel

using it for hours a week. Government surplus is a great way to find items for your studio. I have seen wheels sell one at a time and in multiples as well. Sometimes they require a little repair but mostly things work fine having been surplused after a change in programs at schools. I am willing to invest a little time, travel, and repair for a good deal. I have done most of what you are saying and am not being very successful. Marc suggested I get in touch with the seller and make a offer. This is a older wheel that has a new half horse motor in it from Brent, that is plenty of power for me. I am not a production potter.

I have showed my new wheel to two people, both of them immediately asked me what I was going to do with my kick wheel. They had a relative or friend looking for a potters wheel. I hate to get rid of a old friend but I have MS and just cant kick it up fast enough anymore. Denice This line of wheels became unsupported when Speedball purchased CI and the seller was all to well aware of this. Plus, you get a full warranty and no more wasted time chasing elusive leads. For an extra few hundred just buy a new wheel. I run a community studio with 12 of these and they see constant abuse. Occasional repairs aside from the controller are pretty inexpensive. With basic care Im sure this wheel would last many years beyond that. Im sure you will be happy with one. Paste as plain text instead Display as a link instead Clear editor Upload or insert images from URL. The Brent CXC pottery wheel includes the Brent Classic Controller with these features Be the first to write a review Ecommerce Design by Grow With Studio.
