The Canon Rebel G is a bantamweight camera. It's all plastic design makes it feel like you're holding nothing at all. You can get it [HERE](#). And in 2000 the first Digital SLR was designed and produced, from 2005 onwards all EOS cameras used a digital sensor and so film was waved goodbye to in the rearview mirror. At the core of the Canon EOS is the EF lens mount, this replaced the former FD lens mount which mainly supported only manualfocus lenses. The EF bayonet style lens mount broke compatibility with the FD mount. One somewhat important feature that is missing is the depthoffield preview, Canon left this off on the model. The lightmeter is quite accurate and gives good exposure on sensitive films, even when taking shots of confusing landscapes. The Rebel does a good job of resolving these, it might be a half a stop here or there out on really tricky frames, but otherwise does an excellent job. The Rebel wasn't crippled like the A2e and so you get a full meter scale in the viewfinder even if meteredmanual mode is active. The downside The camera has all the confusion of modern super AF bodies without their capability. It can be difficult to position oneself comfortable to get a tactical view through the viewfinder. If you are a hardcore Canon Rebel nut, you already know you want it. It even expands into a useful tripod! Always be weary when buying off Craigslist. Black and white street photography is my goto. The focusing point can be selected manually by the user or automatically by the camera. Focusing the desired subject can be as quick as a more expensive camera. The following picture-taking modes can be set Shutter speed-priority AE, aperture-priority AE, shiftable Intelligent program AE, Programmed Image Control modes, depth-of-field AE, program flash AE, and metered manual. The camera comes in silver or black. Three focusing points selectable by dial operation or by the camera automatically. Hot shoe provided for flash sync. Built-in electronic self-timer. Blinking shutter speed display is a camera shake warning. Three focusing points superimposed, in-focus indicator, exposure display dots exposure compensation amount, metered manual exposure, auto bracketing amount, red-eye reduction lamp ON indicator, flash ready, high-speed sync, shutter speed setting and control value, and aperture setting and control value are displayed with a yellow-green LED. Panorama frame New EOS Kiss only. Maximum 9 multiple exposures cancellable manually. Retractable head. TTL auto flash control fires automatically in backlight and lowlight conditions in the Full Auto and three Programmed Image Control modes with off-the-film metering. Flash sync speed set automatically anywhere from 30 sec. Fill flash enabled. Red-eye reduction lamp provided. With the optional Canon Speedlite 220E or 380EX, the camera's AE lock button fires a preflash. The resulting reflection off the subject is metered partial metering at center by the AE sensor to determine the flash output. FE lock can also be controlled in this way. Guide No. 12 at ISO 100 in m. First, the entire roll is wound on the takeup spool. Then each time a picture is taken, the film advances back into the cartridge. Film transport with the built-in motor. Film advance speed 1 fps. After the last frame is exposed, the film is rewound automatically. Midroll rewind enabled.

It's a plastic camera with a plastic lens mount and a mirror prism, so it weighs nothing! Its frame counter always shows you the frames remaining as it counts backwards. Its advantage is that it weighs nothing and works great. It shoots in all exposure modes and has a modern evaluative metering system. It's an easy camera to knock around all day, and brings back great results, even on Fuji Velvia 50 slide film. If I shot this camera all day, every day I'd want a better finder for my convenience, but as a knock-around camera, it's great. The 1993 EOS Rebel XS should not be confused with the Digital Rebel XS that was introduced in August 2008. EOS Rebel G, 1635mm II at 16mm, Tiffen 812 filter, Fuji Velvia 50. I had no manual and had no problems. Personally, I prefer to use my thumb anyway. Even with shots deliberately designed to confuse the meter, it gave OK results, although maybe a half to a full stop different from what I'd get from the infallible Color Matrix meter of the Nikon F6. The Rebel G works perfectly for shots with direct sunlight or blinding reflections shining into the camera. EOS Rebel G, 28135mm IS, Tiffen 81C filter, Fuji Velvia 50, and a reflection off the glass that's blinded many people. The Rebel G ignored the reflection and gave a perfect slide. I recall no warnings from the camera that the flash exposure may have been low; my Nikons tell me when I've made a shot that might turn out too dark with a rapidly blinking flash bolt. It's much better than the puny finders of

Canons 1.6x digital cameras, but not as sharp as the fullframe digital and better film SLRs. I find the display of the 1Ds Mk III too dim, while the more primitive display in the Rebel G is fat enough and bright enough to be legible in any light.

There are three indicators in the bottom digital display that tell you which are active. I prefer this to my Nikon F6, which shows more in the finder than I get on my slides. Advantage Rebel G! You can set Red Eye mode, the beeper, multiple exposures and bracketing. Its so easy and well thought out it was obvious even without the Users Manual. I had no problems reading it, but bring a small flashlight or pop open your cell phone if you want to read it for night shots outdoors. OFF is the red L position of the big top dial. ON is any other position. I only use the L position when putting it away in a case where the shutter might get pressed accidentally. The counter starts at about 37, and counts down the number of shots remaining. The top LCD blinks the film icon to let you know its time to pull out the film. You can unshift the program by shifting it back to normal, or letting the meter timeout or change the exposure mode dial. You can check this by pointing the Rebel G either at a very bright white in direct sunlight or at a solitary light at night. When you tap the exposure lock button youll see the exposure settings change a lot. The Rebel G selects these for us based on the exposure mode. For instance, sports id AI SERVO tracking and portrait is ONE SHOT focus and lock, etc. If your subject is moving and the Rebel G cant lock in a second or so, it keeps hunting and tracking with the dot off. THis is what my Rebel G does, which disagrees with the Owners Manual. Unlike Nikons, you cant change the sync by itself. It works great for night shots. There is no bargraph indication of by how much youll be underexposed as you have with most Nikons. It beats me why Canon is giving these fullframe lenses away with their 1.6x cameras, and personally I bought a 28135 IS from a friend who got his 40D as a kit with it and didnt want it. It costs you nothing, and is this sites, and thus my familys, biggest source of support.
