The SOFTWARE PRODUCT a nd documentation are provided with RESTRICTED RIGHTS.Xalan The Apache Software License, Version 1.1 Copyright c 1999 The Apache Soft wa re Foundation. All rights reserved.All rights reserved.It is a fram ework within which device or servicespecific management modules can share a user interface, alarm monitoring, and other basic functions. Popular management consoles include Microsoft Management Console MMC, HP OpenView, Tivoli Enterprise, and CA Unicenter. MetaConsole technology enables development of a single client module that works with multiple management consoles and multiple network protocols on multiple platforms. This guide describes how the MetaConsol e client manages Canon devices for CA Unicenter NSM. Chapter 1 introduces the client, and Chapters 2 and 3 contain instructions for

using the client to manage the complete line of Canon imageRUNNER, imageCLASS and CLBP 460 PS devices. You use the navigation tree in the navigation pane on the left to select the information you want displayed in the details pane on the right. <http://www.yesilalanlar.com/upload/i32-manual.xml>

A Configuration node for information related to that MetaConsole server. For information, see the getting started guide for your console. A node for each type of device that MetaConsole manages. The Canon Devices node contains. For information on higher level configuration — configuration of MetaConsole servers generally and of a particular MetaConsole server's treatment of all devices — see the MetaConsole for Unicenter 3.0 Getting Started for Canon Guide. All clients use the same values; if any client changes a particular setting, the change affects all clients that use that setting. Specifying IP Address Ranges to Include in Device Discovery For each MetaConsole server, you specify ranges of IP addresses for automatic device discovery. To add a range of IP addresses for device discovery 1. In the navigation pane, expand the Canon Devices node and the Configuration node, and click Discovery Ranges. 2. Under Add New Discovery Range, in the Start Address boxes, type the lowest IP address in the desired range. 3. In the End Address boxes, type the highest IP address in the desired range. 4. Click Add. To remove a range of IP addresses 1. In the navigation pane, expand the Canon Devices node and the Configuration node, and click Discovery Ranges. 2. Under Auto Discovery Range List, click the start address or end address of the range to be removed. 3. Click Remove. So in general, it is not necessary to explicitly exclude a range of addresses. However, excluding a range can be useful. For example, if you want MetaConsole to discover devices between 10.0.0.40 and 10.0.0.80 except for 10.0.0.52 through 10.0.0.56, you can include the large range but exclude the small range. To exclude a range of addresses from device discovery 1. In the navigation pane, expand the Canon Devices node and the Configuration node, and click Blocked Ranges. 2. Under Add New Blocked Range, in the Start Address boxes, type the lowest IP address in the desired range. 3.

In the End Address boxes, type the highest IP address in the desired range. 4. Click Add. To remove a range from the list of excluded ranges 1. In the navigation pane, expand the Canon Devices node and the Configuration node, and click Blocked Ranges. 2. Under Blocked Discovery Range List, click the start address or end address of the range to be removed. 3. Click Remove. Manually Adding or Removing Individual Devices In addition to specifying address ranges for automatic device discovery, you can manually add addresses to the list of discovered devices. To manually add a device to the device list 1. In the navigation pane, expand the Canon Devices node and the Configuration node, and click Manual Discovery. 2. In the Device Address boxes, type the device's IP address. 3. Click Add. To delete a manually added device from the device list 1. In the navigation pane, expand the Canon Devices node and the Configuration node, and click Manual Discovery. 2. Under Manual Device List, click the IP address you want to delete. 3. Click Remove. To delete all manually added devices from the device list 1. In the navigation pane, expand the Canon Devices node and the Configuration node, and click Manual Discovery. 2. Click Remove All. For details about the form that the actual alarm takes, see the getting started guide for your console. To select events that will raise alarms 1. In the navigation pane, expand the Canon Devices node and the Configuration node, and click Alarm Management. 2. Select the check box for each type of information you want alarms generated for. 3. Click Apply. Specifying Rates and Timeouts To set rate and timeout values 1. In the navigation pane, expand the Canon Devices node and the Configuration node, and click Rates and Timeouts. 2. In the Discovery Refresh Rate list, click how often the client should refresh the navigation pane's list of discovered devices. 3. In the Alarm Poll Rate list, click how often the client should poll for alarms.

Greater numbers of devices require a greater value for Alarm Poll Rate, due to the increased network traffic. 4. Click Apply. You must set it correctly in order to change any device information.

To configure the devices Write Community string 1. In the navigation pane, expand the device's node and click Write Community. 2. In the Write Community box, type the string. 3. Click Apply.

Displaying Status and Errors To display a device's status and instructions for fixing problems. In the navigation pane, expand the device's node and click Status. The details pane reports the contact person's name, along with detailed status of device components.

Displaying Paper Cassette Information To display information about a device's paper cassettes. In the navigation pane, expand the device's node and the Printing node, and click Cassettes. The details pane displays each cassette's name, paper size, a rough approximation of the number of sheets contained, and status.

Displaying Tray Information To display information about a device's output trays. In the navigation pane, expand the device's node and the Printing node, and click Trays. The details pane displays each tray's type.

In the navigation pane, expand the device's node and the Printing node, and click Interface. The details pane displays the language used by each device interpreter and details about each print data channel.

Displaying Color Settings To display a device's color settings. In the navigation pane, expand the device's node and the Printing node, and click Color. The details pane displays information about the device's color technology, if present.

Displaying Marker Information To display information about a device's marker technology. In the navigation pane, expand the device's node and the Printing node, and click Marker. The details pane displays information about the device's marking technology.

Setting the Device Name and Description To modify a device's name and location and the contact person's and service person's names 1. In the navigation pane, expand the device's node and click Settings. 2. In the Device Name box, type a name for the device. This is the name that will display in the navigation pane. 3. In the Location box, type a description of the device's location. 4. In the Contact Name box, type the name of the person to contact regarding the device. 5. In the Contact Number box, type the phone number of the contact person. 6. In the Service Person Name box, type the name of the device's service person. 7. Click Apply.

Enabling or Disabling Jam Recovery To enable or disable jam recovery for a device 1. In the navigation pane, expand the device's node and click Settings. 2. In the details pane, select or clear the Jam Recovery check box. 3. Click Apply.

In the navigation pane, expand the device's node and click Components. The details pane displays information including the device's network interface type, disk size, amount of memory, print resolution, print speed, and localization language and country.

To reset network settings to their factory defaults 1. In the navigation pane, expand the device's node and click Maintenance. 2. In the details pane, click the Reset Factory Defaults option and OK.

In the details pane, the following information is displayed

Name The name of the print application. Zone The zone of the print application. Address The AppleTalk address in the format NNNN.OO.SS.NNNN is the network number, OO is the node number, and SS is the socket number. For example ff00.de.81.2.

To change the phase type In the Phase Type list, click a phase type, and then click Apply.

Configuration Click in the list to select a configuration method for IP address information.

IP Address Type the IP address of the printer controller. Subnet Mask Type the subnet address mask of the printer controller.

Gateway Address Type the gateway address of the printer controller. DHCP Server Address Only if your Configuration selection is DHCP Type the IP address of the DHCP server. Enable DHCP Only if your Configuration selection is DHCP Select this check box to enable DHCP, or clear it to disable DHCP.

RARP Server Address Only if your Configuration selection is RARP Type the IP address of the RARP server. BOOTP Server Address Only if your Configuration selection is BOOTP Type the IP address of the BOOTP server. Enable BOOTP Only if your Configuration selection is BOOTP Select this check box to enable BOOTP, or clear it to disable BOOTP.

Scope ID Type the SMB scope ID. SMB Server Name Type the SMB server name. Enable LM Announce Select this check box to enable LM Announce, or clear it to disable LM Announce.

Name Server Settings Enable WINS Resolution Select this check box to enable WINS resolution, or clear it to disable WINS resolution.

WINS Server Type the name or IP address of the primary WINS server. Node Type Click in the list to select

the node type. Print Applications This section might not be displayed. Enable LPD Select this checkbox to enable LPD, or clear it to disable LPD. 3. Click Apply. Managing IPX Properties The IPX properties that are displayed can differ depending on the device model. To display and change IPX-related properties for a device 1. In the navigation pane, expand the device's node and the Networking node, and click IPX. 2. In the details pane, change the following settings as desired Enabled Frame Types Select or clear checkboxes to enable or disable frame types, or in the Mode list, click the frame type to enable. Selection method depends on device model. Print Application This section might not be displayed. Mode Click in the list to select a print application. NDS Tree Name Type the name of the PServer's tree. Context Type the name of the PServer's context. PServer Type the PServer's name. Password Type the PServer password.

Clear Click to clear the File Server, PServer, and Password boxes. File Server Type the name of the file server where the PServer is located. Password Type the password required for logging in to the file server. 3. Click Apply. Displaying Network Interface Information To display information about the network interface. In the navigation pane, expand the device's node and the Networking node, and click Interface. The details pane displays facts about the network interface, including network topology, the device's physical address, and the total octets transmitted and received. Displaying Protocol Diagnostic Details For diagnosing network problems, the client provides details about network settings and activities. To display diagnostic details. In the navigation pane, expand the device's node, the Networking node, and the Protocol Diagnostics node, and click the node for the desired protocol. The details pane displays statistics about network traffic. Running the Device's Host Utility To use the device's embedded Web utility 1. In the navigation pane, expand the device's node and click Host Utility. 2. In the details pane, click LAUNCH. This page requires Javascript. Last manuals provides you a fast and easy access to the user manual CANON IMAGERUNNER 1310. We hope that this CANON IMAGERUNNER 1310 user guide will be useful to you. The machine illustration on the cover may differ slightly from your machine. Introduction Table of Contents. Table of Contents Index 322 Introduction You can create scan areas cropping areas for images shown in the Preview Area. Creating Multiple Cropping Frames. You can create another cropping frame even if there is already one in the Preview Area. Click and drag the mouse cursor outside the existing cropping frame to create a new cropping frame in that area. Scanning will continue until all selected areas have been scanned. The most recently created cropping frame will become the focal point. To make adjustments to previously created cropping frames, select the frame or frames by clicking on them. After previewing, click Auto Crop on the toolbar. Clicking this button enables you to gradually crop off the image outside the borders detected in the preview image. Troubleshooting Creating a Cropping Frame. Click Crop on the toolbar, click on the preview image and drag over the area you wish to select. To move the cropping frame you have selected, click inside the cropping frame and drag. Introduction Deleting Cropping Frames. If you want to remove cropping frames, select the frame or frames and do one of the following Introduction Favorite Settings. Favorite Settings enables you to save a set of settings Input Settings, Output Settings, Image Settings and Color Settings made for the focal cropping frame. If there are no cropping frames, settings for the whole preview area are saved. You can also recall the saved settings and apply them to the selected frames or the whole preview area. Selects where the document is placed. Selects the size and orientation of the original

document. Reduces the dust and scratches on photos. This may remove delicate parts of the image.

IntroductionRebuilds the color quality that has faded over time. It also increases saturation of dullcolored originals to reproduce a vivid image. This may change the tone of the image. This may lower the image sharpness and tonal quality. The density of dots for any given output device, expressed in terms of dots per inch dpi. Low resolution causes font characters and graphics to have a jagged appearance, but prints faster than higher resolutions. Higher resolution provides smoother curves and angles as well as a better match to traditional typeface designs, but prints more slowly. Resolution values are represented by horizontal data and vertical data, for example, 600 x 600 dpi.

TroubleshootingPrinter driver. In any way cant Lastmanuals be held responsible if the document you are looking for is not available, incomplete, in a different language than yours, or if the model or language do not match the description. Lastmanuals, for instance, does not offer a translation service. We delete comments that violate our policy, which we encourage you to read. Discussion threads can be closed at any time at our discretion. Thus it will make a verrrrrry easy opening to get the paper out!D

Must be a small Check these areas on your printer to see if you can locate them. To select events that will raise alarms

1. In the navigation pane, expand the Canon Devices node and the Configuration node, and click Alarm Management.
2. Select the check box for each type of information you want alarms generated for.
3. Click Apply.

Specifying Rates and Timeouts To set rate and timeout values

1. In the navigation pane, expand the Canon Devices node and the Configuration node, and click Rates and Timeouts.
2. In the Discovery Refresh Rate list, click how often the client should refresh the navigation panes list of discovered devices.
3. In the Alarm Poll Rate list, click how often the client should poll for alarms.

I would try the vista drivers first.

If they do not work then try win xp 1310 DRIVERS Hope this helps. Zeppelinx12If its not there, then you dont have it installed install the drivers.

Answer questions, earn points and help others. It was developed for small businesses and departmental workgroups; the monthly duty cycle is rated at 20,000 impressions. Enhanced resolution on the imageRunner 1310 is 2400x600 dpi, so media is printed with bold lines and detailed graphics. The toner 7814A003AA yield is estimated at 5,300 pages at 6 percent coverage. You can purchase replacements in either the genuine Canon brand or premium compatible. To make your workflow more productive the Canon imageRunner 1310 offers image combination and electronic collation. Two pages can be combined to print on a single page—reducing paper consumption. The 30 page automatic document feeder on the imageRunner 1310 enables you to place your print project in the feeder and walk away; this is perfect for when you have multiple originals to copy. Please call us for the most accurate information. Please contact us for options. Precision Roller is in no way affiliated, sponsored or endorsed by these copyright owners or their affiliates or dealers This website uses a secure server to encrypt all sensitive information. Please update your browser. Once processed, the estimated delivery time can take anywhere from 15 business days depending on the shipping destination. Designed to increase operator efficiency, the Canon Copier image RUNNER 1310 features an intuitively designed userinterface allowing users to perform all functions with ease. All our buy canon imagerunner 1310 printer toner cartridges, remanufactured or compatible inkjet cartridges and laser toner cartridges contain at least as much ink or toner as original manufacturer products. Indeed many ink cartridges and laser cartridges contain much more ink or toner. Some compatible inkjet cartridges contain as much as three times the amount of ink found in original inkjet cartridges.

So no matter which make of printer you have, you can be assured that we can help you to reduce your printing costs, and we can supply the lot. Les produits sont bon et le prix est imbattable. your search again later. To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. There is also a Mate 10 Porsche design, which has 256Gb of storage but is otherwise identical to the Mate 10 Pro. Chinese and international models are available in dual SIM configuration. It comes with Android 8 and a newer version of Huawei's EMUI interface. All Mate 10 models are unlocked and GSM only. Huawei phones, including the Mate series, are not sold or financed through U.S. carriers due to pressure from U.S. intelligence agencies, though they are available from independent and online retailers. On the Kirin 970, the NPU takes over tasks like scanning and translating words in pictures taken with Microsoft's Translator. The other SIM will be inactivated. The Pro models do not have expandable storage. The prefix BLA designates a Mate 10 Pro, ALP designates a Mate 10 and RNE designates a Mate 10 Lite. The BLALOAC model is an alternate name for the BLAA09 model sold through special OEM arrangements at U.S. retailers like Best Buy. The TL00 model appears to be a limited distribution Himalayan model closely resembling the AL00 Chinese models.

There are 6 models of Mate 10 Lite, L01, L02, L03, L21, L22, and L23; L0x models are single SIM and L2x models are dual SIM; otherwise the Mate 10 Lite has a fixed configuration and the models differ only in geographic area of distribution and the local GSM frequencies supported there. Also, no dual SIM models are sold in the U.S. The Mate 10 series was initially released to select markets on Oct. 16, 2017, followed by U.K. and Europe in late 2017, then the United States on Feb. 18, 2018. For products released prior to this date, the service will be stopped 60 days after this announcement. Thank you for your understanding. This image cannot be rooted. Due to its lower screen resolution, the Mate 10 Pro has a slight advantage especially in graphics intensive applications. The performance of the Mate 10 Lite, with CPU and GPU 23 generations older, falls far below that of the flagship models. Predecessor phones like the Mate 9 and P10 are not affected; only products released from 2Q 2017 and later. The list of benchmarks affected is extensive Geekbench, GFXbench, 3Dmark, Antutu, Quadrant, and others. However, private benchmarks identical to the public ones except for the names of the apps, and embedded strings containing the names, show radically different performance. The company has stated that it will make Performance mode available to ordinary users. It is not clear that GPU turbo see below is the putative performance mode. GPU turbo mode, the company claims, eliminates GPU throttling by using AI paradigms to predict invariant portions of the screen to reduce rendering effort and power consumption. The company does not claim that GPU turbo mode increases the maximum frame rates. The drawbacks for this technology are that it is per device Soc and per game the device must be trained or tuned for each game and the profile data stored on the device. So far, only two games have been optimized for GPU turbo PUBG and Legends Bang, Bang.

The company has also announced that GPU turbo will not be released to the United States market. Other major competitors in the same timeframe were the OnePlus 5 and Google's Pixel 2 series.
