Network cable color code

Image: shuoshu / Vectorig / DigitalVision Vectors / Getty Images HTML color codes comes in 140 varieties, and are used to display various browser colors through HTML and/or CSS codes. For example, a salmon color would have the hex code of #FA8072, while a black color would be #000000. Each of these hex color codes also equates to an RGB color code (which is an acronym for red, green, blue). RGB codes consists of three numbers that correspond to specific shades of red, green and blue colors. When these colors combine, they make up a specific shade of a color that we see.Here's an example: a teal color would have the hex code of #008080. The RGB value of this is (0,128,128). This means that there are no red shades in the color teal, but there is an even mix of specific green and blue shades. If we take a look back at the color code for black, which is #000000, we can observe that the RGB code is (0,0,0). This means that there are no red, green or blue color shades in black. But what does all of this have to do with your personality? In a nutshell, these color codes correspond to a specific shade of color, which means we're about to find out what color your personality is! But the rich hues are especially big this fall (yes, for guys too). Men's and women's jewelry designer Catherine M. Zadeh explains the appeal of a color palette fit for a king. The Men's Store Bloomingdale's bag, \$650 Get Men's Health style tips sent right to your inbox. Sign up for The Style Siren newsletter. 2 of 4 Rich colors rule the runways for fall—and in fact, jewel tones have been popular for centuries. Just ask any royal family member. "Sapphires, emeralds, and amethysts have always been associated with royalty, from the kings of England to the shahs of Iran," says Zadeh. But you don't need to spend a fortune to channel that power. "Wearing these colors—whether in ruby cuff links or bold blue pants—says you're confident and cultured." Florsheim boots, \$130 4 of 4 Advertisement - Continue Reading Below This content is created and maintained by a third party, and imported onto this page to help users provide their email addresses. You may be able to find more information about this and similar content at piano.io What Is it: Flight 001 4-in-1 Adapter Price and Where to Buy: \$25, available at Flight 001 Pros: It's small, and the plugs fit together into a single, lego-like block for easy transport. The single unit also lessens the chance of losing individual plugs, which, if you're anything like me, is why you keep having to buy adapters over and over again. Figuring out which adapter you'll need is as easy because the plugs are color-coded. Cons: It's not a converter, which isn't a con unless you assume it's both a converter and an adapter and plug in an electronic item that isn't dual voltage. (Spud Hilton has a 60-second primer if you need a refresher course on the difference.) How it Rates: Usefulness: 10/10 It's easy to use, easy to pack, and easy to store. Value: 9/10. It's competitively priced, and since its design keeps all the adapters together, you're less likely to lose a plug and have to buy a whole new set. Durability: 10/10. The plugs are sturdy—and that's important when you're on the road and plugging and unplugging your gear into a different outlet each night. Cool Factor: 10/10. The colorful block is like the most useful Lego you've ever owned. Final Verdict: Keeping track of adapter parts between trips and remembering which plugs to use where is a nuisance. This is an adapter that is realistic about the way people use adapters. The four plugs fit together so they store easily, and they're color-coded so you can figure out which you'll need. Editor's Note: Reviews are based on usefulness, portability, durability, value, and "cool factor." Some review products are sent to us free of charge and with no incentive to offer a favorable review. We offer our unbiased opinions, positive and negative, and will never accept compensation to review a product. If you have any questions or comments concerning our reviews, or would like to suggest a product for review, please email us at editor@smartertravel.com. We hand-pick everything we recommend and select items through testing and reviews. Some products are sent to us free of charge with no incentive to offer a favorable review. In nonmetallic sheathed cable (NM) now purchased used for residential and commercial wiring, the outer sheathing color indicates the wire gauge or size and amperage rating of the wire within. However, older installed cable may not have this color coding. Before about 2001, most NM cable had a white outer jacket, but since 2001, most NM-B cable has been jacketed with a vinyl outer insulation that is colored to identify it for both consumers and inspectors. This color coding of the wire sheath is strictly voluntary, but most manufacturers adhere to the color scheme. The five basic color schemes used for the NM cable in residential construction are white, yellow, orange, black, and gray. These colors are seen in the solid vinyl outer jacket that enclose the individual conductors within the cable and are easily identified at a glance. Be aware that black is used as a color for two different wire gauges, so some care is needed when interpreting black cable. Short for Category 7, Cat-7 network cabling is used as a cabling infrastructure for 1000BASE-T (Gigabit Ethernet, or GbE) and 10GBASE-T (10-Gigabit Ethernet, or 10 GbE) networks. The Cat 7 standard provides performance of up to 600 MHz (1000 MHz for the Cat-7a, or Augmented Category 7 standard) and can be used up to a maximum length of 100 meters. Category 7 cable is able to achieve higher performance than preceding Ethernet standards such as Cat 5, Cat 5e and Cat 6 by requiring each of its twisted wire pairs to be fully shielded. This is known as Screen Shielded Twisted Pair (SSTP) or Screened Foiled Twisted Pair (SFTP) wiring, and it almost completely eliminates alien crosstalk while significantly improving noise resistance. The Cat 7 standard was published in 2002 by the International Organization for Standardization (ISO) and is also known as Class F cabling. While more expensive than Cat 5e and Cat 6 cabling, Cat-7 cabling does have a 15-year lifecycle (compared to estimated 10-year lifecycles for Cat 5e and Cat 6), which helps improve its overall return on investment (ROI).
