You can also cancel your subscription anytime. If you canceled your subscription before the free trial ends, you won't be charged. Follow the steps instructed above, in order to watch Amazon Prime Video on Philips Smart TV. We hope that you'll get it all well.Thank you! Sometimes your Philips TV doesn't come preinstalled with the Prime Video app when you wanted to play videos from amazon prime video. Even though it's a smart TV you won't be able to install the Prime Video app on your TV because there won't be Play Store access. Let's learn whether your Philips TV supports amazon prime video and how you can download and install it on your Philips TV.On Old Philips TV there is no pre-installed android tv based Amazon prime video app. You will have to install it manually using the apk file. In modern Philips TVs with android 9 you can install the amazon prime video app from the Google play store easily. Let's learn how.The newer Android TV-based Philips TVs comes with amazon prime video app support out of the box. So you can easily download the Prime Video app from the play store on your TV.Open the Google Play Store on your Philips TV and Search for Prime Video app.Then close to the app Click on the Install button to download install it on your Philips Smart TV.Now open the prime video app and log in with your Amazon account to watch your TV series or movies.Start your PC and open your desired browser. Here I will be using chrome browser. This version of the app only supports arm7 processor-based Android TVs. Mostly all TVs use ARM-based processors.Go to this URL to download the Android TV optimized amazon primevideo5.3.9-armv7a.apk file of the amazon prime video TV app directly on your computer. Now load the primevideo.apk file into your Pendrive or to an external portable USB hard disk.Then connect the pen drive or hard disk to your Philips smart tv. And open a file explorer or manager app on your TV. And open the primevideo.apk file.Now Click the Install button on the prompt window to install the primevideo.apk file on your Philips Tv.The Video application will be installed and will show up on your TV apps section on your Philips tv.The Old Smart TV from Philips doesn't run on android TV OS and instead use some other OS. So you cannot download the Prime Video app.So you have to mirror your smartphone screen to your TV in order to watch Amazon Prime video on your Philips TVs.After installing the Prime Video app, launch it, and log in to your Amazon account to start watching amazon prime videos on your Philips Smart TV.Hope you were able to download, install, and watch amazon prime video on your Philips TV series. Check out more about our website and our writers on our About US page. Also follow me on Twitter page and LinkedInreport this ad Few set top boxes support every service you want, but when you've got one that runs Android there's usually a workaround. One of the most frustrating omissions from Android TV's app catalog is Amazon Prime Video, but you can change that with just a few simple steps and no rooting required.Amazon usually puts its apps on every platform, but with Prime Video the company is decidedly selective. You must to own one of their devices to get the full experience, or just work around that problem. That's what we're going to do right now. You actually have a couple of options to choose from, so take your pick:ChromeCast ItIf you have a computer with a browser you can cast a tab filled with Amazon Prime Video right over to your Android TV. This may sound less than ideal, but if you've got a nearby laptop with a reasonable amount of processing power you can just play the video in a tab and leave it in the background. When you set the video to full screen while casting, Chrome knows you don't want the full screen takeover on your computer. It'll keep the video windowed in the browser but provide the full experience on your Android TV.So how does this all work? Follow these simple steps:Open up Google Chrome on your computer.Install the Google Cast extension and follow the setup instructions.Click the Google Cast icon in your browser bar (as pictured above) and select the Android TV device you want to cast to. (If it doesn't show up, click Options for the option to search for new devices.)Play the Amazon Prime video you've chosen to cast and click the full screen button.Enjoy!That's about it. There's a tiny bit of lag, but nothing you'll notice since you're going to pretty much ignore the video on your computer and just watch it on the TV. You won't hear audio from the computer as well, fortunately, but can see the video in the cast tab so you can pause, fast forward, rewind, and so on. With this option you may limit the quality of the video stream, but in my experience it looks pretty good all things considered and this is the quickest, most simple way to get any video you want on your Android TV.Install Amazon Prime Video LauncherIf you want to watch Amazon Prime Video without the help of an extra computer, you can sideload an app that'll give you a comparable experience to that of the Fire TV. Here's how you do it:Surprise, surprise! Head on over to the XDA forums and download Prime Video Launcher. (You may also need to download the Amazon Prime Video APK as well, but more on that later.)On your Android TV, open up Settings and visit the Security & Restrictions section. The first choice should be Unknown Sources. Turn it on. (Amazon Prime Video won't run without this.)You can sideload the APK in another way if you prefer, but I got it on my device quickly with ES File Explorer. If you don't have that on your Android TV, download it now.Open up ES File Explorer and find a cloud or network service that you use. I used (the cloud service) Dropbox and dropped the APK in a folder in my Dropbox account. Whether you've got Dropbox, Google Drive, or something else you'd prefer, link it up with ES File Explorer. If you sync the APK to your account, when you load the folder you put it in within ES File Explorer you can just select it and open it.When you open the Prime Video Launcher you'll be asked to confirm its installation, but moments later it'll open. You'll be asked if you want to install Amazon Prime VOD, which you need in order to actually watch anything. Confirm that you want to install the latest version and wait for the install to complete. In some cases it may fail to download and you'll have to install it manually. Simply repeat this process, but sideload one of the VOD APKs found in this XDA forum thread.Once you've installed Amazon Prime VOD successfully, open it up and log into your Amazon account.That's it! Now you can watch Amazon Prime Video on your Android TV like it was actually meant to be there. Hopefully someday Amazon will allow us to install the app wherever we like without this extra effort, but at least you've got a couple of simple methods to get the job done right now. © 1996-2014, Amazon.com, Inc. or its affiliates Philips 32PFL4908/F7 32-Inch 60Hz LED TV by PHILIPS xSorry to interruptCSS Error Amazon Prime app is more popular app to watch tv shows & series, videos and movies.
