# How to setup google chromecast on android phone

How to setup chromecast with android phone.

By now, most people know that you can save a lot of money by cutting the cable cable. But if you want to pass in streaming to your TV, you probably need a device to do it. A convenient choice is Google Chromecast. With it, you can send almost everything from your phone to your TV. In this article, you guided you through the steps to set your chromecast and start streaming. What you need to configure Google Chromecast here is what you need before setting up your Google Chromecast: TV with a wall outlet of HDMI ports near the smart internet wireless device once you have everything together, grab your Chromecast device And start the configuration. What comes with a Chromecast Google (3rd generation) Here's what is available in the box: Chromet device Plug Power Adapter Micro USB Cable Adapter Quick Guide As you can see, there is not a lot of hardware. This is because you will use your smartphone or another smart device as Chromecast remote control. How to set Google Chromecast to learn how to configure your Chromecast, you can watch the video in which above. Or Continue reading to follow the configuration steps for this streaming device. Step 1: Principa in the first, take the micro USB cable and connect the Micro USB end (the lower side) to the side of your Google Chromecast. Then enter the normal USB end in the wall adapter and connect it to the wall socket. Now, connect the device into an HDMI port on the TV. Remember the number next to the HDMI input you have chosen because I need it in a minute. Step 2: Tune the TV to the TV remote control, use the input button, source or similar to tune the TV at the same entrance as Google Chromecast. The entrance to the source menu must correspond to the HDMI port number on the TV where you have connected the device. Once the right input is selected, you need to view the instructions from the Chromecast. Step 3: Connect and configure the device for this step, you would like to make sure your phone or other intelligent device is connected to the same Wi-Fi that the Chromecast will connect to. The screen will ask you to download the Google Home app to configure the streaming device. Once downloaded, open the app and click [À º º À º º À](#) "Get started." You will ask you to access a Google account. If you are already logged in to one or more Google account on your device, everyone will appear on the screen. Select the account you want to associate with Chromecast. When there are other Google devices connected at wi-fi, they will also appear in the Google Home app. To add your chromecast, click the top sign in the upper left corner, then select [À º º À º º À](#) "Score The device." "Click [À º º À](#) " New devices "and enter your nickname home and address. In the menu [À º º À](#) " SOOSE a home-[º º º](#), select the HOME profile you created Or your existing home profile if you already have a set up. The Google Home app will require access to the location, which you need to activate to complete the Chromecast configuration. Once you do it, Google will try a device to configure. The device name in your app must match the device name displayed on The TV screen. Click [À º º À º º](#) "Iyes [À º º À º º](#) and your device connect to Chromecast. Now your device will display a code that should match the code on TV. If you go, click [À º º À º º](#) " Yes. [À º º À º º](#) So you need to accept the legal terms of Google and choose if you want to share Device statistics and crash reports with Google. After that, the app will ask where the device is at home to nominate it and help you organize your Google devices. Select the Wi-Fi you want to use your Chromecast. Once connected, your device will install updates and restart. Step 4: Link Other services Once you restart the streaming device, the app will ask you to connect your Chromecast to other services such as Google Assistant, Radio Services and Video Services. He asks you to link these accounts so you can ask your google assistant to play a specific station. When you do it, your device should be able to understand you and throw the IL You asked. Step 5: Transmit to TV now You [À º º](#) Game is created! In your app, Google will show you the connections you have completed that your Chromecast is ready for use. You [À º º](#) I must use the [À º º](#) caste button in the applications on the device to view them on the TV via the Chromecast. For information on how to do this, choose one of the Google examples provides in the app. Click the Cast button, choose your Chromecast nickname, and look at the big screen. You can still use the device to do other things while you [À º º](#) king casting. Google also says that you can control the volume of what you [À º º](#) re-dispensing the volume controls on the you [À º º](#) king device using. When you're ready to stop, click the Jet button on your device and select a casting stop. [À º º](#) Now you just have to download applications for your favorite services to start watching! Final considerations The installation is simple and the Chromecast gives you step-by-step the directions along the way. ClarkDeals.com Sarah editor has Chromecast and says she really likes the experience of streaming. A great advantage for you is that more people can control the TV with different devices, so Dona t must deliver the phone to scroll through someone through the channels. Chromecast works very differently from other low-cost WEA [º º](#) ve tested devices. There [À º º](#) s minimum hardware, which means takes to have to worry about having to find a remote control whenever you want to see something. How is your Google Chromecast experience? Let us know in the comments below! Other stories Clark.com would please you: Source: Android.com Google announced its Android line one of the low-cost smartphones, destined for buyers in emerging markets, last September. At the time, the company announced the initiative as the correction to bring [À º º À](#) "the next five billion users online, with its low-cost hardware promise, the latest version of the Android operating system and The complete complement of Google mobile software of [º º º](#). As Mark Bergen Report for Re / Code, Android One has been included among the many efforts for globally broadcasting internet access, and has been internally seen as an attempt to avoid another China, where Android is popular , but generally comes without access to the Google [À º º](#) s service. It was also seen as a hedge against Facebook, which is becoming the Internet access door in many parts of the world. But so far, he has not made any of those goals. Android one has started with a splashy marketing boost, but it was a disappointment since then. Consumers and manufacturing partners were reluctant to board. The program has spread quickly, reaching the most recently its seventh country, Turkey, in May. Google should announce an additional OEM partner in India, which would make the 11th Android One device. Each existing Android One device runs on Android Lollipop 5.1, and Google is moving to update them to the next version - a rarity in emerging markets. But Google has mostly impossible to get those phones in consumer hands. Analysts estimate that in the first 100 days program, around 700,000 single Android phones were sent, especially in India. The same number shipped in the next five months. As he did in India, Google recruited national producers in Indonesia and Bangladesh. But those hardware partners are still growing, and the lack of larger Android phones manufacturers muscle, such as Samsung. [º](#) Neil Shah, director at counterpoint Research, said Bergen that a Google was able to rope in a Local kings. [À](#), but competition has been even more aggressive than phones One. The sub- \$ 100 dream of retail sales and corresponding execution didn't go exactly as it was planned. [À º](#) Part of the problem is that Google has forged partnerships with country-specific hardware manufacturers, instead of global giants . These local producers were a logical goal, since they are growing throughout Asia and are willing to respect the Google S requirements for Android One. One. Their destination market, super-low-cost phones, it is cutter and pets against global giants like Samsung and Motorola Plus new arrivals [À º](#)
