Auto call recorder free download for samsung mobile. Download free call recorder for samsung mobile. Free call recorder for samsung. Best free call recorder for samsung. Spy call recorder for samsung mobile free download. Free call recorder for samsung s8.

In some countries, there is a legal requirement to inform u to obtain consent before recording a call and in certain countries may not be allowed. By using this functionality, you accept any and all liability arising from the use of this functionality and require compliance with applicable laws.1. What is the call Recording function? À call recording is a function that allows you to record incoming and outgoing calls. you can listen to the recordings in the truecaller app u the open call recordings in your phone storage.2. is call recording just a premium feature? No, this feature is available to all users of truecaller Android.3. what is the permission required for this functionality? for android 5.1 - 8 users, call recording requires Microphone storage and permission. À for android 9 users and above, call recording requires storage, microphone and Accessibility permission. 4. Why can't I find truecaller in accessibility settings? for users with android 9 u upper, it is necessary to give permission to truecaller accessibility. permission can be found in native settingsà ->à Accessibility. À for some devices can be found in native settingsà ->à accessibilityà ->à services installedà uà downloaded apps.5. where can I record my calls?the call recording button will be available in truecaller full screen caller id and pop up caller id if all permissions are granted.6. Can I manually turn this feature on and off? Yes, it can be switched on and off manually at any time. Please navigate to the side menu. À list of android call recording problems: [001] all calls are not recorded, why? [002] some calls are recorded but some calls are not, seems random, why? [003] in all callsmy voice © Good, but the caller's voice is © Weak, why? [004] On some recorded calls my voice © good, but the voice of the interlocutor © Weak, yet on some recorded calls both voices are perfect, seems random, why? [0051 made a call to my friend, the first few seconds weren't recorded, recorded, No Bluetooth calls are recorded very well, however with Bluetooth my own voice or the voice of the listener © very weak on recorded calls, why? [007] Support 2019-03-09 phone numbers can n o longer be obtained and calls were saved as "Unknown", why? I can't open the application, or when I open the application, the screen is blank, or it shows "the application is not installed correctly". Why? When I played back my recording calls were totally silent, why? All calls are not recorded, why? There are seven possible reasons: there is another recorder working on its phone that blocks the Boldbeast. Android only allows one working recorder, so you MUST remove all other recorders in the beginning, otherwise Boldbeast will surely fail to record calls. You are using a "voice assistant" app, the application is occupying the microphone, it is continually picking up sound from the microphone to recognize its "voice command", and it blocks the Boldbeast job. Please disable the voice assistant app. The "OK Google" application is © the most popular voice assistant on Android phones, please turn off the following option on your phone: On some phones, disable the option "Configurations>Google> Search> OK Google Detection> From any screen option. On some phones, disable the option "Google Configurations> Google Search >OK Google detection> Say Ok Google at any time. On some phones, disable the option "Configure" Google >Search >Voice Match >Say Ok Google at any time. On some phones, disable the option "Configure" Google>Search> Voice match> Undo with the option Voice Match."If you are using a Samsung phone, please check the application Bixby too. © m, h © Samsung's own voice assistant, you must disable it. If you are using a Moto phone please check the "Moto" app also © m, h © Engola's own voice assistant, you must disable it. If you are using a Huawei phone please check the HiVoice application too © m, h © Huawei's own voice assistant, you must disable it. On some Huawei phones, disable HiVoice. "HiVoice." In this way: Open the "Settings > Apps > HiVoice" screen, confirm that the package name is © "com.huawei.vassistant". Click "Force Stop". On some Huawei phones, disable the option "Dialler > Settings > Quick Calling". On some Huawei phones, disable the option "Contacts > Fast Calling >". On some Huawei phones, disable the "Settings > Apps > System Apps > Voice Dialer" option. On some Huawei phones, disable the "Settings > Apps > HiVoice" different location, read your user manual if needed. For other phones, it is © that the manufacturer has its own voice assistant on the phone, please check it, do not let block the work of Boldbeast. You revoked the necessary permissions by Boldbeast, this caused the app to fail or function abnormally. Please don't do that. If you "Force Stop" Boldbeast on the "Settings > Apps" screen, this tells Android that "I don't want Boldbeast to run", then Android will no longer allow Boldbeast to run, all your calls will no longer be recorded. The next time you manually open the Boldbeast Android you know that you want it to work again, then Android will allow the Boldbeast race, all your calls will be recorded again. For this reason, please do not "Force Stop" Boldbeast. You are using wrong settings in Boldbeast to record calls. Please click "Set Preset Settings" in Boldbeast and test again. If you do not enable the "Auto Record Calls" feature during a call, you must click the call button to manually start recording if the call will not be recorded. If you have enabled the "Auto Record Calls" feature, please confirm that you have set the "Call Settings > Auto Record Calls > Rule to Auto Record Calls" option in Boldbeast correctly. Some They're recorded, but some aren't, it seems random, why? Android 6.0 and later versions have a feature called Battery Optimization, t o save Android battery will put an application in the disabled state if the application is not s used for a long time If a call recorder is placed in the disabled state: When a new incoming call arrives if the screen is turned off, android will not allow the recorder to work, as a result the call will not be recorded. If the screen is turned on, all applications are activated in this case, the call can be recorded. When you are making a list of exit the screen is on, all applications are enabled in this case, output calls can always be recorded. This is the reason why "it seems random." Please change the definitions related to the battery optimization on your phone to correct this problem. The location of the settings may be different from phone to phone, for example: Android Common Phones Open the Embedded Screen "Settings> Battery> Battery Optimization, Set Boldbeast for "NÃ Optimized ". Samsung Phones Open the Embedded Screen "Smart Manager> Battery> Apptimization> Detail", set BoldBeast for "Disabled." Huawei phones Some Huawei phones, open the embedded screen "Settings> Phone Manager> Protected Applications", set BoldBeast for "Protected Application". Some Huawei phones, open the embedded screen "Settings> Applications> Advanced> Ignore "Definitions> Energy Saving> Protected Applications", set BoldBeast for "Protected Application". Some Huawei phones, open the embedded screen "Settings> Applications> Advanced> Ignore Optimizations", set boldbeast to "Ignore optimizations". Some Huawei phones, open the "Settings> Applications and Notifications> Applications> Settings> Special Access> Ignore Battery Optimization", expand "allowed" to "allowed / all applications" and choose "All applications," click "BoldBeast recorder" and set to allow. HTC Phones Open the Embedded Screen "Settings> Feed> Battery Optimization", Set BoldBeast for "Don't Optimize". Important even if it has changed the above settings, still Some phones have a built-in application called "System Cleaner" or something similar, when doing the cleaning task kills applications for their policy. If Boldbeast is killed, his calls will not be recorded. In this case, please add Boldbeast to your "White List", so that no Kill Boldbeast. Some phones can enable an "Ultra Energy Saving Mode" or something similar, with this enabled only several applications are allowed to work. For example, On Samsung Galaxy S7 when you enable Ultra Energy Saving Mode only the following applications are allowed to work: Email Telephone Messages from Internet Calendar (embedded email application) Facebook WhatsApp The file"/system/csc/allowed apps upsm.xml" ip ROM defines the list of applications above. The list © different from telephone to telephone, different from the market area to market area. All other applications outside the list do not work, include Boldbeast. So if you activate the Ultra power saving mode your calls will not be recorded unless you add Boldbeast to the list. If you root on the phone, you can change the file "/system/csc/allowed apps upsm.xml" to add new applications to the list or remove applications from the list. Search through Google to learn how to change the file. If you do not root on the phone you cannot change the file. Some phones have a built-in feature called "Adaptive Block" or something like that. Please confirm that it does not restrict the Boldbeast to doing its jobs. Some phones kill apps aggressively. To prevent the Boldbeast from being killed, On some phones, click on the box cone at the bottom right to show the "Recent Applications" screen, scroll to locate the Boldbeast on it, click on the top right three points cone, click on Lock to block the Boldbeast. After Boldbeast you will no longer be killed. On some phones, click the box cone at the bottom right to show the "Recent Apps" screen, scroll to locate Boldbeast on it, click on the top right lock cone to block Boldbeast. After Boldbeast you will no longer be killed. On some phones in Xiaomi, click on the box come in the Bottom right to show the "Recent Apps" screen, scroll to locate the Boldbeast on it, click the Boldbeast screen and secure it for 2 seconds, then click the gear cone, switch the battery protector to "No restrictions" and automatically switch to "On". After Boldbeast will not be killed anymore. On some Huawei phones, open the "Configurations> Battery> Launch of the application" screen, change Boldbeast to "Manage manually", and activate all three options on screen. After Boldbeast you will no longer be killed. Some third party applications are very powerful that can prevent other applications from working, such as XX Greenify, XX App Manager, XX Task Manager, XX Battery Optimizer, XX Privacy Guard, XX Clean Master etc. These applications prevent Boldbeast from working, as a result, some of its calls will not be recorded. Please don't let them block Boldbeast by doing this. © Work, usually you need to add Boldbeast to your "White List". Only normal calls can be recorded, wifi calls cannot be recorded no matter what recorder you are using, so if your phone supports the wifi call feature, disable it. [003] On all recorded calls my voice is saved © Good, but the caller's voice is © Weak, why? It is possible that you are using wrong configurations in the Boldbeast. Please click on "Standard Configurations" and test again. If the problem is still there, this indicates that the manufacturer has limited the recording feature of your phone calls. In this case, please: Connect the speaker during a call, so that Boldbeast can record the call on both sides. Or root it, then Boldbeast will record calls perfectly without turning on the speaker. Unfortunately, there are no other better solutions in the whole market. You can test and confirm the fact yourself. [004] On some recorded calls my voice © Good, but the caller's voice is © Weak, however, on some recorded calls both voices are perfect, seems random, why? In the beginning, please know these three facts: Your phone has this problem if you start to record after the call © answered it registers the call perfectly, if you start recording before the call is answered, it can only record your voice (the voice of the Wow. © Weak recording). For an incoming call (your friend calls you), when you respond to the call Android will notify Boldbeast, then Boldbeast knows that "the call © to an exit call (you call your friend), when Friendly answers The android call will not notify bold, then bold does not know if the call is answered. However, if you do your phone in bold, you can detect if the call is answered. If you manually register the calls, click the call button to start the recording only after the call is answered, in this case, please add Boldbeast to your "White List". Some phones and outgoing calls will be recorded perfectly. If you automatically receive calls, please set the following configurations in boldbeast: Input calls> Automatic detection status Reported: Yes Call Settings> Input Calls> Automatically Detect Time Mans Ximo (seconds): 100 Call Settings> Input Calls> Restart Recording After Answer: Yes Call Settings> Saúda Calls> Automatic Detection Answer Status: Yes Settings Calls> Saúda Calls> Automatically Detect Maximum Time (Seconds): 15 (In Root) Call Settings> Saúda Calls> Saúda Calls> Restart the recording after answered: Yes Calls for Configurations above, BoldBeast can detect if the call is met, it starts the recording only after the call is answered, so the incoming calls will be saved perfectly. For Saúda Calls If you do not make your phone, please set "Call Settings> Saúda Calls> Automatically Detect Maximum Time (Seconds)" to 15. Android Do not Notify Bold When your friend answers the call, then BoldBeast starts the recording of arbitrarily output calls 15 seconds after dialing. If your friend answers the call within 15 seconds, it records the call perfectly because it starts the recording after the call is answered. If your friend answers the call after 15 seconds, he records only his voice (his friend's voice is weak), because he begins to record before the call is You can change 15 to another number as your will, please see [005] below too. If you have rooted your phone, set "Call Settings> Saúda Calls> Max Auto Detection (Seconds)" A 100. With Root Boldbeast You can detect if your friend responds to call, it starts the recording only after OO It© answered, so it records the call in perfection. For this reason, consider, if possible, rootyour phone [005] I made a call to my friend, the first several seconds were not recorded, why? The option "Call settings > calls made > the auto-optimal time (seconds)" option is defined too large. Please change it to a smaller number (e.g. change it to 3 seconds) to resolve the issue, but at first you should check whether or not your phone has the problem described in [004] above. [006] Without bluetooth the calls are recorded very well, but with bluetooth my own voice or the voice of the interlocutor Is © very weak in recorded calls, why? There is a bug in your phone's ROM related to bluetooth recording, regardless of the recorder on the market where you are using the problem is always present. Boldbeast can solve the problem for most phones. Please root your phone, activate the "Call Settings > Fix Recording Issues > Change Audio Control" option in Boldbeast, then record the calls perfectly in two directions via bluetooth. The option only © after the phone is rooted [007] After 2019-03-09 the phone numbers can no longer be obtained and the calls were saved as "Unknown", why? After 2019-03-09 all Google Play recorders are prohibited from asking for the following 2 permissions: android.permission.PROCESS_OUTGOING_CALLS android.permission.READ_CALL_LOG Boldbeast had to remove these 2 permissions from the application published on Google Play, just as all other recorders did. As a result, on some phones the application can no longer get phone numbers, so calls will be saved as "Unknown". on some phones the system may not notify the record label part of the events such as "an incoming call is ringing", "a call made is to dial", "the call is off the rest", "the is turned off", etc., so the application may have incorrect information about a call. For example, you can save a call as a getout call, but in reality it's © incoming call. Due to this new Google Play rule, all Google Play recorders suffer the same pain No exceptions. However, the application published on our official website manta © take these two permissions unchanged, so that it can get phone numbers and will be notified by the system when the phone call states change. Recordings of calls will be saved with phone numbers, contact names and calls correctly as before. [008] I cannot open the application or when opening the application the screen is blank, or I will display "The application is not installed correctly". Why? Google Play asked developers to use the new AAB format instead of the traditional APK format to publish applications. When you install an application, Google Play send to your dynamically generated phone files according to your phone specification, s o the files received are smaller, and they are different from the phone to the phone. BoldBeast V12. 7 and more recent vers es published in Google Play used the new AAB format. Cheers. © Now it works well. However, on some phones, BoldBeast fails when you open it. That's because: you installed the bold from a third party application store that took the Google Play app, and the file did not match your phone specification. You installed BoldBeast from a file your friend shared for you and the file did not match your phone specification. You installed Google Play BoldBeast, but Google Play sent the wrong files to your phone to install. In this case, please install the application from our official website, the problem will be fixed in one fell swoop. BoldBeast published on our website used the traditional APK format, so there is no such problem. When I played my phone records, they were completely silent, why? Your phone is running Android 10 or a more recent version, in which Google added a new limit, and this makes all your recordings in silence. BoldBeast may with success the limit. Please confirm that you are using the latest version of the application and: on your phone (not in bold) Open "Configurations> Accessibility" or "Configurations> System> Accessibility" and activate "BoldBeast Call Recorder" on screen. Inside Inside tap "Set Default Settings". Now your recordings will not be quieter. Please remember to do the two things above, otherwise your recordings will be completely silent on Android 10 and in newer versions. Please also read the following NOTES 1 and 2. NOTE 1 Some phones especially block users to use the above settings to record calls. As a result, the recorder cannot record recordings, or can record recordings, but these continue to be completely silent. In this case, if your phone is a Samsung phone, please activate the option "Call Settings - Fix Recording Issues - Tune Samsung1" and test again. If your phone is running Android 10, please: Turn on the "Call Settings - Fix Recording Issues - Tune Audio Effect" option and test again. Now, if the tapes are good, that's fine. Otherwise, also change "Call Settings - Record Mode" to Mode 14 and test again. Now, if the tapes are good, that's fine. Otherwise, please also change "Call Settings - Record Mode" to Mode 11 and test again. Now, if the tapes are good, that's fine. Otherwise, please also change "Call Settings - Record Mode" to Mode 5 and test again. If the recorder still cannot save recordings, please see [001] above to know how to fix them. If the recordings are still completely silent, see the "Note 2" below to know how to handle them. NOTE 2 After doing all the above things, if the recordings are still totally silent. On your voice is good, but the voice of the person you were talking to is weak or silent on the recordings. This indicates that the manufacturer (not Google) had added more limits on your phone. In this case you should connect the speaker during a call, so that Boldbeast can record the call on both sides normally. Or Root the phone, so Boldbeast can solvethe problem and record calls perfectly on both sides without turning on the speaker. Unfortunately, it doesn't have any other anything else in the entire market, because all the other 100% recorders don't work without exception. You can test and confirm this by yourself [101] How to change change folder in which I save my recordings? On Android 10 and older versions, tap "App Settings - Clip Saving Folder" to choose the folder you like. In Android 11 and newer versions, first please change "App Settings - Clip Saving Drive" to SAF (Storage Access Framework), then tap "App Settings - Clip Saving Folder" to choose the folder you like. [102] I changed my phone, how to copy recorded files from old phone to new phone? On your old phone, if you have configured the Boldbeast backup for recorded files on your cloud drive (Google Drive, Dropbox etc), please: On your new phone, open the screen "App Settings > Backup Cloud Drive" in Boldbeast, set on-screen options for the same as your old phone. Click "Initial Sync" to download recorded files from the cloud drive to your new phone. Now, on your new phone, you can see old recorded calls on the Call List screen, old memos recorded on the Memo List screen. On your old phone, if you have not configured Boldbeast backup of recorded files to your cloud drive, please: Connect your old phone as a disk to your computer with a USB cable, copy recorded files from the "Clip Saving Folder" on the phone to your computer. Connect your new phone as a disk

to your computer with a USB cable, copy recorded files from your computer to the "Clip Saving Folder" on your phone. On your new phone, open the Call List screen in the Boldbeast, click the Menu button, click Rebuild List to display your old recorded calls. On your new phone, open the Memo List screen in the Boldbeast, click the Menu button, click Rebuild List to display your old recorded memos. [103] Boldbeast displays a message that said "the chosen folder is very slow", why? Please update the Boldbeastthe latest version to fix it. [104] I connected the phone to my computer by a USB cable, on the computer I can see the phone, but I can't see the folder in which the recorded files are saved, why? This problem is related to the ROM of your phone and the software driver on your computer. For some phones, you To change some special options on your phone, read your phone's manual, if necessary. For some phones, when you connect your computer to your computer through a USB cable, your phone will display the following "USB connection to your computer" options: Multiman Device (MTP) CÂ ¢ Mara (PTP) Upload only mass storage (UMS) should select "Massive Storage (UMS)" above. For some phones, it is necessary to download a USB driver from the phone manufacturer's website and install it on your computer, then you can use the file manager / file explorer, etc. To manage the files on your phone. For some phones, it is necessary to unload a software (called Phone Assistant, Phone Manager or something similar) from the phone manufacturer's website and install it on your computer, then use the software to manage the files on your phone. For some phones, on your computer you can only see several specific folders (you can not see any other folders) on the phone, in this case define BoldBeats to save recorded files in a folder that can be seen on your computer [161] Is it "rooting a phone"? Does this mean to get superuthilizer privileges from your phone to access some resources limited by the system [162] Do I need to root my phone? How to root my phone? There are over 10000 Android phones on the market. Some of them do not need root, boldbeast works very well, just install the application and leave. However, some of them have problems with recording (for example, the voice of the person who calls is very weak in the recordings), and will see that all recorders do not work well. In this case, you must root the phone and then the boldbeast can arrange it perfectly. BoldBeast can fix almost all Android phones with root, making the crystalline records on both sides. The root approach is different from phone to phone, please Google "Root AAAA" to know how to root your phone. Here AAAA is your phone model, for example google "Root Galaxy S10" [163] I rooted my phone and other applications can get access to the root successfully, but the application said "can't get access to the root", why? Why?They are using an old version of the application. Please update Boldbeast on your phone for V14. One or one more recent verse, then it works right away [201] Which one? © the difference between the professional version and the free version? The pro version has more 2 features than the free version: The functionality "Automatic Recording of Calls" The pro version can save calls autonomously or manually, the free version can only save manually. The pro version can research recordings for Advanced Research or Simple Research, the free version can only by Simple Search [202] previously bought the license in Google Play, Now I want to transfer the license to my new phone but I don't know my order number in Google Play, how can I find it? Please open the Google Play app on your new phone, confirm in the "History of Orders" section that you can see the Log Track item (Boldbeast). Open the On-screen in Boldbeast, click the Transfer button, it will display your Google Play order number at the bottom. If for any reason you do not show your Google Play order number, also © m you can find it on the receipt sent to you by Google. Searching for "Boldbeast" in your Gmail can quickly locate the receipt. If you have deleted the receipt from your Gmail, please: enter your online account at . Click on "Subscriptions and Services> View Purchases". Click on Register Code (Boldbeast) to see your receipt. You'll see the Transaction ID-this © your order number o n Google Play. Note: There is n o Google Play order number if you purchased Google Play lice n se (for example, bought it o n our website with PayPal, Taobao, Avangate, etc.), so you don't need to worry about this [999] More help Need more help? Please click on the "Call Settings >Fix Recording Issues >Ask New Parameters" entry in Boldbeast to send log files service@boldbeast.com and detail your problem for us, let us check them out and help you.
