Before the advise of today's high-tech phones, a dedicated landline phone or even a separate answering machine was often required to pursue missed calls. But now you can access your voicemail messages from a device that fits into your pocket! The fact is that this requires preparatory preparation. This tutorial shows you how to set up and operate a voicemail account on your Android smartphone. First of all, we will explain to you how to configure the general settings for your Voicemail account so that it is set up correctly from the start. Then we show you how you can actually get your account up and running. Set up Voicemail on an Android phone 1. Turn on your phone and start the phone app. First of all, we will explain to you how to configure the general settings for your Voicemail account so that it is set up correctly from the start. Then we show you how you can actually get your account up and running. Set up Voicemail on an Android phone 1. Turn on your phone and start the phone app. It is usually in the standard menu on the bottom of the screen. 2. access extended telephony options. In the upper right corner of the screen, click the "More options" button (three vertical points) and then on "Settings". 3. Select to adjust your call settings. Then click on "Connections" in the menu that appears. 4. Select to manage your voicemail settings. Click Voicemail in the Call settings menu. 5. Select which service processes your voicemail, which telephone number is diverted there and which tone or vibration you inform you about the message. In the next menu you can change various aspects of your voicemail. You can select your Voicemail system by tapping service. This can be the standard system of your mobile phone provider or a third -party application you installed. By typing on settings, you can change some of the basic functional of Voicemail, e.g. B. the telephone number you have to call to switch on or access them. Tap sound to choose the sound that is played when you get a voiceemail message. You can also set your phone so that it vibrates when you get a voiceemail. Simply click on vibrating to activate or deactivate the box next to it and switch it on or off (each). All is well! Your voicemail is now set up as you wish. How do you activate it now? Well, for most Android telephones you have to dial into the account set up by your mobile phone provider. In the next section, we will discuss how this works. Activate Voicemail on an Android phone 1. Turn on your phone and open the phone app. Turn on your phone and tap the phone app as if you want to call someone. 2. Open the key field to enter the number of the Voicemail system. Then tap on the keyboard symbol WON screen 3. Call the number of your voice mail system or hold the "1" key. Now tap on the numbers on the keyboard to convert the number associated with your secretary account; It can be found in the configuration menu that we talk about when we discuss how to install voicemail. Then press the green call button. Or, if it's really problematic, you can keep the first one. 4. Complete the responder configuration by saving your name, choosing a greeting and setting a password. Since each telecom operator works a little differently from others, the process here may be slightly different. However, although the sequence of steps and specific execution are different, the general passages to follow are practically the same. First, you'll need to save your name so you know who's looking for your voice message. Follow your needs. For others, you will have to choose to greet the responder. To select a general or specific greeting, press a button on the keyboard. Then check the prompts to select or save your welcome message. If you want to save your secretariat a professional greeting, or if you want a fun greeting instead, we have some suggestions that you can use. Finally, you will need to select a password option. If this option appears, press the key on the keyboard to choose whether you want to lock the password on the voicemail account. (In this case, we ask you to use the password ... or anyone who uses your phone or knows your answering machine number Do it automatically, watch, watch and instructions to confirm the password. Tips for installing Android phone 1. See Android phone to get specific information about your voicemail plan. Before you go through the process of installing and activating a voicemail system, you should make sure that it actually exists! Some carriers may include an audio messaging system with additional cellular services, while others may ask you to pay extra to add it to your plan . To find out if your current plan is involved in voicemail, check the carrier agreement that came with your phone or your online account with that carrier (if you have one). If you're still unsure, call your carrier directly and ask it. Also someIt can offer many voicemail options, each with different capabilities and limitations. For example, they may differ in the number of messages a message can contain or in how long stored messages are retained. In short, remember to read what your voicemail can (and can't) do before setting it up. 2. After setting up your voicemail system, verify that it is working properly by calling you. An easy way to check that your voicemail system is set up correctly is to establish a test connection to do it yourself. Simply borrow a friend or family member, call the phone number on Android, and let the call go to voicemail. This will allow you to verify that the name and greeting job you want to work on is saved. You should also leave a test message to make sure your voicemail is working properly. Click here to learn how to check your voicemail. 3. If you are having problems with your voicemail system, contact your telecommunications service provider for assistance. If you're sure you have voicemail on your current phone plan, but you're having trouble accessing or setting it up, contact your carrier. Call them, send them an e-mail. Send mail or check their online troubleshooting guides to see if you can get help or a problem. You can even get help resetting your voicemail password or recovering lost messages. That's all you need to do to set up and activate your voicemail account on your Android smartphone! Next, we will discuss what you need to do if you want to change your voicemail. Before today's technologically advanced cell phones, you often had to have a dedicated landline or even a separate automated machine to track late calls. But now you can access your voicemail messages from a device that fits in your pocket! Here's the thing: it takes a bit of preparation first. This tutorial will show you how to start your voicemail account on your Android smartphone. First, we'll cover how to customize your voice account's general settings so they're set up right off the bat. Next, we'll show you how to pass the bill. Setting up voicemail on your Android phone 1. Turn on your phone and launch the phone app. Turn on your phone and tap on the phone app. It's usually the default menu at the bottom2. Access to advanced phone settings. Click the More options button (three vertical dots) in the upper right corner of the screen, then click Settings. 3. Select to customize call settings. Then click Connections in the menu that appears. 4. Select to manage your voicemail settings. In the Call Settings menu, tap Voicemail. 5. Select the service that will process your voicemail, the phone number it will forward it to, and the sound or vibration that alerts you to the message. Another menu allows you to change various aspects of your voicemail. You can select a voicemail system by clicking on a service. This may be the default system of your telecom operator or a third party application that you have installed. By clicking on configuration, you can change certain basic voicemail behaviors, such as the phone number that will be used to activate or reach it. Click yours to select a sound to play when you receive a voice message. You can also set your phone to vibrate when you receive a voice message. Just press the vibration to check or uncheck the neighborhood and activate or deactivate it (like maybe, maybe). EVERYTHING IS FINE! Voice messages are now customized as desired. So how do you actually activate it now? Well, for most Android phones, you will have to call the account set up by your telecom provider. In the next section, we'll see how to proceed. Activate voicemail on your Android phone 1. Turn on your phone and open the phone app. Light up your phone and press the phone app. 2. Open the keypad and enter the Vocal Exchange System number. Then tap the digital coverage icon at the bottom of the screen. 3. Call your voice mail system or just press and hold "1". Now press the keyboard shapes to dial the number associated with the voicemail account; This can be found in the Settings menu we mentioned when we discussed the voicemail configuration. Then press the green call button. Or, if you're putting too many challenges, you can just press the 1 key and keep pressing it. 4. Complete the voice mail configuration by entering your name, selecting a receive message, and defining a password. The process here may vary slightly because each telecom operator manages voicemail messages slightly different from the others. However, while the steps and specific execution may differ, the general steps to follow are essentially the same. First of all, you will have to write down your name for the people who callVoice mail, you know who they called. Just follow the instructions you think to register it. For others, you must select a voice greeting. Select a general or personalized greeting by pressing the appropriate button on your keyboard. Then follow the instructions to select or record a greeting. We have a few suggestions for you to follow if you want to record a professional-sounding greeting or if you want a fun one. Finally, you must select the password option. Choose whether you want to lock your voice account with a password, if you have the option, by pressing the appropriate button on your keyboard. (If so, we recommend that you use a password... otherwise anyone who uses your phone or knows your voicemail number will be able to listen to your voice messages!) If you decide to set up a password lock or ask for it to be done automatically, follow the instructions to create and password confirmation. Tips for creating voice messages on an Android phone 1. Check with your courier for details of your plan. Before you try to go through the setup process and activate your voicemail system, make sure you have it! Some carriers may bundle your voicemail system with other cellular services, while others may require you to pay extra to add them to your plan. Review the Corriere contract information that you likely received with your phone or online account from that courier (if you have one) to see if your current plan includes voicemail. If you're still unsure, call your carrier and ask them. Also note that some carriers may offer multiple voicemail options, each with different capabilities and limitations. For example, they may differ in the number of messages they can contain, the length of each message, or how long messages are stored. In short, be sure to familiarize yourself with what your voicemail can (and can't) do before setting it up. 2. After setting up your voicemail system, verify that it is working properly by calling you. An easy way to make sure your voicemail system is set up correctly is to make a self-test call. Just borrow a phone from a friend or family member, call an Android number, and turn on the calling system. This will allow you to make sure that the recorded name and greeting work the way you want. You must also skip the testThis way you can ensure that saving a voice message works properly. Click here to find out how to consult voice messages. 3. If you encounter problems with the voicemail system, please contact the telecom operator for help. If you are sure you have a voice reporting system in the current phone package but are having difficulty accessing it or configuring it, inform your telecom operator. Call them, send email or check if you can get help or check if there is a solution to your problem. You can even get help resetting voicemail password or recovering missing messages. That's all you need to do to configure and activate voicemail account on Android smartphone! Then if you want to change the message about receiving a voicemail, we'll see what to do. Welcome.
