## Shri ram birth date according to nasa

New findings have confirmed the existence of Lord Rama, with a specific birthdate scientifically validated. According to the Institute for Scientific Research on Vedas (I-SERVE), planetarium software has pinpointed Lord Rama's birth as January 10th, 5114 BC in Ayodhya, between 12pm and 1pm, Shukla Paksha in Chaitra month. The institute claims success in substantiating many ancient events in Indian mythology that supposedly took place before 2000 BC using the same software. Additionally, the software used by NASA and Nehru planetarium to determine planetary positions can be used to validate the existence of characters and events described in the Ramayana. Scientists have utilized new scientific tools and techniques, such as planetarium software, computers, space imagery, underwater explorations, and radio carbon dating, to substantiate the existence of Lord Rama and other incidents from the Ramayana. If you want to learn more about these words, simply search for them online. I apologize in advance if any mistakes or inconvenience occur due to my writing. Accept infinite love, thanks, and respect from me as we embark on this spiritual journey together. As a regular blogger on Speaking Tree, LinkedIn, Twitter, Facebook, and other platforms, you can find all my posts and profiles by searching with the keywords "Pravin Agrawal Spiritualist Blogger". Adhyatma Vidya or Divine Knowledge is considered the ultimate wisdom, and I am committed to sharing it in an easy-to-understand format. To gain this knowledge, one must engage in Abhyas, or regular practice. Re-reading my posts will help solidify your understanding and bring you closer to knowing the Almighty God. The root cause of the chaos in today's world is ignorance. Fights, quarrels, pain, and evil are all symptoms of a lack of spiritual knowledge. To spread light and positivity, please share this with others through Mygate App or Spiritual India WhatsApp Group. My posts are not meant to be taken lightly; they are based on universal truths and actual facts. I am merely a medium for Sri Krishna's sacred task. Those who share my work may gain a glimpse of divine knowledge in this life itself. Please note that my writings are not mere poetry but rather expressions of truth at different levels of understanding. They belong to Sri Krishna, not me. Here are some interesting facts: 25 Shocking Facts about Lord Rama no one knows!; Lord Rama's date of birth scientifically calculated - 10 Shocking Facts about Ravana no one knows!; and answers to questions from Ramayan. There are also shocking secrets still unknown to the world, such as places of Ramayana in present times. This approach ensures that even after millennia, it's possible to determine the exact date when an event occurred. Additionally, astronomical dating validates the event itself, as someone had to be present or calculate the celestial bodies' positions with modern software. The method also eliminates the need for a specific calendar system, making it universally applicable. For instance, if we were to discover an article written in 2007 but using a different calendar system, we wouldn't know the exact date without referencing the Gregorian calendar. In contrast, astronomical dating provides a precise timeline that's unaffected by changes in calendars or eras. In archaeological research, dating ancient events is crucial for understanding historical sites like Ayodhya. Unfortunately, India's ASI has only excavated to a depth of 5 meters at this site, whereas finding evidence of over 7,000-year-old history may require digging as deep as 60 meters. The concept of dating Lord Rama's era using astronomical methods is also significant, considering the debate surrounding the Ramayana and its historical accuracy. The Valmiki Ramayana mentions planetary positions at the time of Lord Ram's birth, which has been used to calculate his exact date of birth: January 10, 5114 B.C. Further research can be done to date other events in Lord Rama's life, including his birth and subsequent happenings until his age of 39 when he returned to Ayodhya after slaying Ravana. Given article text here **## Ancient Indian Astrology Used to Determine Historical Events** The ancient Indian text Ramayana, written by Sage Valmiki, used astronomical positions to calculate dates and times for various events in the life of Lord Rama. Recently, an attempt was made to verify these calculations using modern planetarium software. **## Verification Using Modern Technology** A researcher used a powerful planetarium software to confirm that the positions of planets mentioned in Ramayana matched their actual positions on certain dates. The calculations were conducted objectively, without any manipulation or doubt, ensuring the accuracy of the results. **## Alignment of Planetary Positions** The researcher found that the planetary positions described in Ramayana for Lord Rama's birth date and other significant events aligned with modern astronomical data. This verification provides evidence that the ancient Indian astronomers accurately recorded their observations. **## Implications of Verified Observations** The successful verification of these calculations using modern technology has significant implications for our understanding of ancient Indian astronomy and the accuracy of historical records. Not much evidence to support claims, says historian. Indologists believe that Bhatnagar should provide archaeological proof for his dates. Western historians find these dates too old to be accepted. By God's grace, he found some interesting archaeological evidence, which he describes in the following paragraphs. A few months ago, NASA photographed an ancient bridge-like structure between India and Sri Lanka. Many historians and theologians jumped at the story, linking it to Lord Rama. However, NASA denied any statement about how the bridge was built. The excitement died down soon, and nothing could be concluded as they were trying to prove that the bridge was built millions of years ago. Bhatnagar says, "Just think about it." If you build a house with stones that are millions of years old, does your house also become millions of years old? No. Bhatnagar believes this is the mistake historians made while claiming the ancient bridge and Lord Rama's antiquity were built millions of years ago. The remains of the bridge, which Lord Rama built, can still be seen at a place called "Chedu Karai" in Tamil Nadu. The remains are 1.5 kilometres inside the sea, 10 feet below the water level. Valmiki Ramayan mentions that six months later, when Rama killed Bali on Ashadh (June-July) of the 14th year of his exile, a solar eclipse was visible in the morning sky and after five months, when Hanuman went to meet Sita in Lanka, a lunar eclipse was witnessed in the evening. The rise of sea level is a continuous phenomenon since the end of the last ice age (about 16,000 B.C.). Countries like the USA and Australia are making emergency plans due to the accelerated rise in sea level. Bhatnagar researched this topic and found that about 7,000 years ago, the sea level was exactly about 10 feet below the present level. This means that the remains of the bridge can be part of it and dates back to around 7,000 years ago. The ancient Hindu civilization of Ramayana has been extensively researched by scientists using advanced software called Planetorium. According to their study, Lord Rama was born on January 10, 5114 BCE, based on planetary positions at that time. The study calculated this date by simulating the arrangement of planets during the birth of Rama and found a match in 5114 BCE. The text also quotes from Valmiki Ramayana's Bala Kanda, which describes the exact astronomical conditions present at the time of Rama's birth: \* 9th day after new moon \* Moon in Punarvasu Nakshatra (20° Gemini to 3.20° Cancer) \* Sun in Aries (exaltation sign) \* Mars in Capricorn (exaltation sign) \* Saturn in Libra (exaltation sign) \* Jupiter in Cancer (exaltation sign) \* Venus in Pisces (exaltation sign) The study also validates other events from the Ramayana, such as Bharata's birth and Hanuman's visit to Lanka, using lunar eclipses that occurred at those times. The research concludes that Rama existed in 5114 BC. Comparing this date with the estimated time of the Mahabharata (3000 BCE), the scientists note that there is a difference of only 2000 years between these two events. Given that the current year is 2015, this means that Lord Rama's era occurred around 7000 years ago, highlighting the significant time gap between different eras in Hindu mythology. The text concludes by questioning why there is still debate about the historical accuracy of these events, despite scientific evidence supporting their validity. The Kalki Avatar's birth and pralaya are mentioned in various puranas, but no specific locations or planetary alignments are specified for his arrival. According to Hindu scriptures, the Ramayana epic is an integral part of Indian mythology and has been referenced in numerous religions worldwide. The geological research on Rameswaram bridge suggests that it was built 7000 years ago, with some scientists supporting NASA's findings. A study on planetary alignments at Lord Ram's birth revealed a date of noon-time January 10, 5154 BC (7,137 years back). This information has been referenced in several Abrahamic mythologies, including the story of Adam and his expulsion from the Garden of Eden. The legend of Lord Ram finds mention in various scriptures across multiple religions, including Sikhism, Jainism, Buddhism, and others. The stories of Ramayana have spread far beyond India, with regional versions existing in Japan, Indonesia, Malaysia, and other countries. Carvings of Shri Ram and Lord Hanuman were found in Kurdistan, Iraq. The Egyptian King 'Ramses' sounds like 'Ram'. There are wall paintings from 7th millennium BC showing scenes from the Ramayana with people having tails or carrying bows and arrows. Ravana's name is similar to the Italian city of Ravenna. Rome is believed to have taken its name from 'Ram'. Prince Ram went on a barefoot journey through many places in India before invading Srilanka, leaving marks that can still be seen today. The new Ram Janambhoomi Mandir is set to open soon in Ayudhya and it's here where the epic story begins. According to legend, Lord Ram and his family crossed the holy Ganga at Prayagraj before going to Chitrakoot. Sita was abducted by demon King Ravan at Panchvati near Nashik. A legend says that Lakshman cut off Sharupnakha's nose there and Shabari fed berries to Lord Ram. At Lepakshi in Andhra Pradesh, Lord Ram saved Jatayu by saying 'Le Pakshi'. He met Hanuman at Kishkinda, a city near Hampi, and planned an invasion of Srilanka with the Vanarsena army. The stories about Lord Ram's journey continue to be told today at places associated with him in India, where people go on pilgrimage to these temples.
