Select your fibre provider Select your package speed Testing your internet speeds ensures you are getting the performance your ISP has promised.The easiest way to do this is by using the MyBroadband Speed Test app.Simply open the app, click Start Test, and the tool will automatically determine your ping, upload, and download speeds.The MyBroadband Speed Test App can be easily accessed through the links below: Using the dataTo use the data the app provides, you also need to understand what each of the three data points represents.Ping: This represents the period it takes for data to be transferred between a server and your device.Download: The speed at which your computer will receive content, such as when watching YouTube or downloading a file.Upload: The speed at which data and files can be moved from your computer and devices to another location through the internet like when uploading a file to Google Drive.Generally, home internet packages are listed in the format of 100/10Mbps, with the former referring to the maximum download speeds, and the latter the maximum upload speed.For example, with the above package, you can expect 100Mbps download speeds and 10Mbps upload speeds.However, its important to remember that youll rarely get exactly what is stated.If your ISP promises 100Mbps download speeds and youre getting 85Mbps, this is perfectly normal, but if youre only getting 20-30Mbps, this is well below reasonable expectations.In this scenario, there are several reasons your Internet could be slow and not all of them are your ISP or network providers fault.These include:Connection type Wired connections are more stable than wireless connections.Multiple devices If you have several devices running background apps at the same time, this can lower network performance as speed tests do not consider bandwidth that is currently being used.Hardware issues Before blaming your ISP/network provider, it is worth restarting your modem or router and seeing if this changes anything.If none of the above tips are applicable, it is time to contact your ISP Click here to perform a speed test. MyBroadband is running a competition to encourage its readers to test their Internet connection using the MyBroadband Speed Test tool. Anyone who follows these five steps will stand a chance to win R5,000; You can either post the link to your test result, or copy and paste your result directly into the thread. Either way, you will be entered in to the competition. The giveaway ends on Friday 22 November 2024, so dont delay enter now. Perform a speed test onspeedtest.co.zaorspeedtest.mybroadband.co.za. The best way to test your South African Internet connection is by using the MyBroadband Speed Test tool. This tool is available at speedtest.co.zaorspeedtest.mybroadband.co.za. The MyBroadband Speed Test tool is powered by 10Gbps servers at the vendor-neutral Terao data centres in South Africa. This ensures every speed test result is unbiased and shows your true Internet pathway. The MyBroadband Speed Test interface is also simple and intuitive, and does not have any intrusive ads or paid features. This makes using the MyBroadband Speed Test tool seamless and convenient. Performing regular speed tests is the best way to ensure you are getting full value for your money from your ISP. Speed tests are also critical when troubleshooting any issues you encounter where websites load slowly or videos buffer: Low speeds probably mean that there is an issue with your ISP or your router. High speeds probably mean the issue is with the websites hosting, or even an undersea cable break. Additionally, testing your Internet speed makes it easier for other South Africans to work out which FNOs and ISPs offer the best connectivity products. Perform a speed test onspeedtest.co.zaorspeedtest.mybroadband.co.za. D Do we know if MTN still zero-rates all bandwidth used by the MyBroadband Speed Test app?Last post mentioning it, that came up in a search, was from 2021. Dean Thread Nov 26, 2024 mtn mybroadband speed test mybroadband speed test server mybroadband speedtest speedtest zero rated Replies: 0 Forum: MTN Mobile Data P Has anyone else noticed that whenever you do a Speedtest on the Ookla app, they over inflate the speed. Doing the same test on the Mybroadband Speedtest app, the speed is accurate to what I currently have. Not sure if they have some special privileges. Or Metrofibre not shaping the speedtest... S So I am once again effectively without internet at home and it's once again this random erratic behaviour that keeps me from using the internet. What causes this on a fibre network? G 40Mbps Telkom Fibre now at 50Mbps! C T If you don't care about upload speed/gaming, have good signal coverage and a clear l.o.s to the tower, Rain's 5G is superior value in my opinion. Download speeds are insanely fast, however if you want to play competitive games where ping and packet loss are important (CSGO, Call of Duty... Blistering fast mobile broadband speeds in South Africa recorded The latest data recorded through MyBroadbands speed test app revealed that Vodacom and MTN produced speeds over 700Mbps on their mobile networks. The peak speed recorded on Vodacoms network was 732Mbps using a Samsung Galaxy... T Wanna see what everyone that has 1gbps connections get on speed tests. So, will anyone willing to post their download, upload, latency, FNO, ISP and what server they tested on, please do so? Here is mine(Take it with a grain of salt, we've been having issues with Vuma and my line):FNO - Vuma... Hi Guys, just wanted to find out if any one else has come across this issue as i'm curios at to what will be causing it. if i do a speedtest on the following sites then my downloads caps out at about 200mb but when using speedtest.net then shoots up to 1G download Speedtest.net... Good day to everyone! I use to have alot of trouble with rain speeds but since rain sent me one of their outside antenna routers (b2338-168) it has been fairly good for me for months! Since last friday night i just got disconnected from everything and rain just cannot find a problem to my... S Hello everyone, Which one of these speed tests is the most accurate? How to know if? Speed Test By speedtestgroup.com speedtest.net by Ookla highspeedinternet.com speedof.me testmy.net fast.com By Netflix C Hi All Just wondering if anyone else is experiencing this behavior. I performed speedtests on my fibre connection and depending on the internet browser i use i get different results some results shocking. I used the Speedtest Microsoft store app and the Ookla CLI test and those seem to be the... csc003 Thread Jan 20, 2021 internet browser speedtest speedtest glitch Replies: 5 Forum: Software M Speed test done by MyBroadband, Awesome Speed by MTN... ) W I am new to the Forum and would like to know why different Speedtests give different results. Using the Mybroadband Speedtest shows me download speeds of over 30mbps and upload speeds of 50mbps which looks great but i am unable to stream any video content from the web. When using the speedtest... I have been following the recent MyBroadband Speed Test App competition and was wondering what the fastest speed was that has been achieved? Has anyone been able to top the one i got on Saturday morning : I was exactly 1km away from the tower using a stock Nokia 5. T Hi, For the last couple of days, when i run the MyBroadBand Speedtest, it reports that i am getting 0.2Mbps downloads, but when i run the SAIX speedtest, i get my full 4Mbps? Is there a problem with the MB speedtest? I actually logged a call to my ISP about the speed before i realised... C Hi there I recently upgraded my 4Mbps ADSL to 10Mbps. When I run speedtest from my laptop and tablet (both connected on wifi) I get a better reading than before (around 8Mbps) but for some reason on my cellphone (connected on wifi) I still get around 3Mbps (similiar to before the upgrade). I... L I hope I am posting this thread at the correct place. Let's dive right into it we have a 10mbps Broadband Connect Wireless Premium connection. About two weeks ago we startet noticing slow speeds on the internet and first thing i did was run a speed test with speedtest.net and speed seemed to be... I have been using Cipherwave / Home-Connect's 100/100Mbps package for the past two weeks and I have SADV (SA Digital Villages) as my fibre provider. My experience thus far has been extremely positive. I have been seeing constant speeds of 95Mbps+ and my downloads on Steam, Origin, etc... Espee Thread May 4, 2017 100mbps cypherwave fibre home connect home-connect sa digital villages sadv speedtest tenda Replies: 843 Forum: Fibre ISP Discussions M I decided to make the change from Mweb to Afrihost because I heard it was much better than Mweb. Since the service started, my speed has been much slower from around 18:00 to 23:00 during the week and around 15:00 to 23:00 on the weekends, I've done checks to make sure I'm not being throttled... Local Internet package prices have decreased significantly in recent years, resulting in more South Africans being able to afford high-speed connectivity in their homes.These packages promise impressive upload and download speeds but not every ISP delivers upon these promises.You should therefore perform speed tests on your home network regularly to ensure you are getting full value for your money.MyBroadband Speed Test appThe best option for running a speed test is the MyBroadband Speed Test app, which can be accessed in the following ways: Next, you must click Start Test and the tool will automatically calculate your ping, download speed, and upload speed.You will also be shown which ISP you are using to ensure you are testing the right connection and once the test is complete, you will have the option to copy or share your result, rerun the test, and rate your ISP.Understanding your resultYour speed test result will include three numbers. This is what they mean:Ping The time it takes for a single packet of data to be transferred between your device and the server. This is an important metric for online gamers, as lower ping numbers result in less lag when playing online.Download The speed at which files and data can be received by your computer such as when watching your favourite streaming service, or downloading a file.Upload The speed at which files and data can be transferred from your computer to other locations on the Internet such as if you are uploading a file to your Google Drive folder.To understand if your download and upload speeds are acceptable, you must understand what speeds your ISP promised.Most home Internet packages are styled as follows: 100/10Mbps.In this example, the package offers up to 100Mbps download speeds, and up to 10Mbps upload speeds.In real-world scenarios, it is unlikely you will ever reach these respective speeds but you can expect numbers that approach this figure.For example, if your ISP has promised you a download speed of 100Mbps, and your speed test indicates 90Mbps, this is acceptable.However, if the speed test shows that you only achieved a download speed of 25Mbps, this would not be acceptable.Reasons for slow InternetThere are several reasons that your speeds may not match the package you are paying for and not all of them are the fault of your ISP or network provider.For example, you may have many background apps running across the various devices in your home.In this scenario, your speed test results would be lower than the actual amount of bandwidth being delivered by your network provider, as a speed test can only determine how much available speed you have on your network.The best way to avoid this is to turn off other devices and rerun your speed test to see what difference this makes.Another reason your speeds may not accurately reflect your Internet package is if you use Wi-Fi, rather than a wired connection.Wi-Fi speeds are generally lower and less stable than using a LAN cable, and this can be amplified if you have an older router, or one that is not operating effectively.Therefore, if you are performing a speed test on a laptop or computer, it is preferable to connect via a LAN cable to negate any Wi-Fi issues.It is also worth restarting your modem or router if you get a bad speed test reading, as this may fix any device-related issues that are causing lower speeds.If none of these troubleshooting tips work, it is advisable that you contact your ISP for more advice.Click here to perform a speed test now. A new South African speed test platform hosted at Speedtest.co.za has been launched to give local Internet users an accurate performance assessment of their Internet connection.Speedtest.co.za is powered by MyBroadband and uses the same speed test engine as many prominent international performance measurement platforms.The new speed test platform has servers at NapAfrica's Internet peering points in Johannesburg and Cape Town to provide a vendor-neutral testing environment.These servers are connected via a 10Gbps link to NapAfrica to ensure there is ample capacity for accurate speeds of even the fastest broadband connections.The Speedtest.co.za platform has a clean interface without ad clutter, and makes it easy for users to measure their download speed, upload speed, and latency.It was built to work on desktops, tablets, and smartphones, which means users can test their fixed or mobile speed on any device.Users can also rate their Internet service provider, share their results on social media, and use the platform to request a fibre upgrade.Test the performance of your Internet connection:Internet Speed Test
